Professional Summary

WordPress Developer with 4+ years of experience building custom plugins, WooCommerce functionality, and API integrations for production websites.

Specialized in backend-driven WordPress development including modular plugin architecture, custom database design, and performance optimization. Experienced in refactoring large legacy plugins, implementing scalable logic, and improving system reliability across multi-site environments.

Experience

WordPress Developer, *Midnay Webware Solutions*

Feb 2022 – Present
Malappuram

- Developed and maintained custom WordPress plugins with complex backend logic and database-driven features
- Designed and implemented custom MySQL tables for analytics, tracking, and plugin data management
- Built WooCommerce custom logic including purchase validation, cart handling, and checkout enhancements
- Implemented REST API and AJAX integrations for external services and internal systems
- Improved performance using caching strategies and query optimization, reducing repeated API/database calls
- Refactored legacy plugins into modular, maintainable architecture for better scalability
- Debugged and resolved production issues across multiple live websites
- Supported multi-site deployments with reusable plugin systems and shared logic

Core Skills

Wordpress: Plugin Development, WooCommerce, Hooks (Actions & Filters), WP-Cron

Backend: PHP, MySQL, REST APIs, AJAX

Frontend: JavaScript, jQuery, HTML, CSS

Other: Caching Strategies, Performance Optimization, Debugging, Git

Key Project

Modular Plugin System & Performance Optimization

- Re-structured large legacy plugin into modular architecture with improved maintainability
- Implemented caching mechanisms to reduce redundant API calls and improve response efficiency
- Designed backend logic using custom database tables and reusable components
- Contributed to improved system performance and stability across multiple deployments

Project Experience

Custom Plugin Development

- Built multiple WordPress plugins with custom admin panels and backend logic
- Implemented database-driven features and structured data handling
- Developed AJAX workflows and REST-based integrations

WooCommerce Customization

- Implemented product-level validation and purchase restrictions
- Extended WooCommerce functionality using hooks and filters
- Improved cart and checkout reliability through custom logic

API & Integration Work

- Integrated external APIs for payments and service integrations
- Built custom REST endpoints and handled request/response processing
- Implemented logging and tracking systems

Performance & Optimization

- Reduced server load by optimizing database queries and backend logic
- Implemented caching strategies for improved efficiency
- Refactored codebases for better maintainability

Education

Bachelor of Computer Applications, MG University

Kottayam, India
